Резльтаты замеров в графиках и выводы:

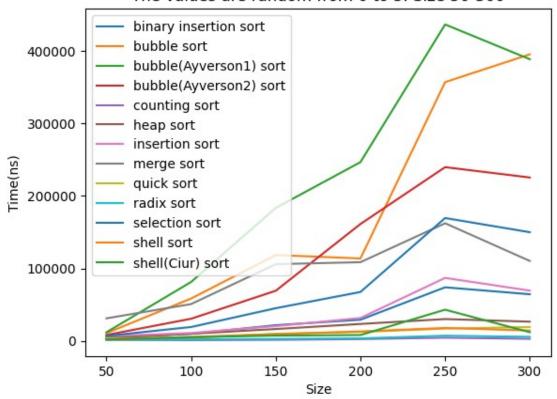

График, показывающий производительность разных сортировок по времени. График описыват массивы размером от 50 до 300 с случайными элементами [0;5]

```
import matplotlib.pyplot as plt
import pandas as pd

df = pd.read_csv("../csvTables/table.csv", sep=';')
filtered_df = df[(df['Type'] == 'basic mass') & (df['Size'] <= 300)]
grouped_df = filtered_df.groupby('Sort')
for name, group in grouped_df:
    plt.plot(group['Size'], group['Time(ns)'], label=str(name))

plt.xlabel('Size')
plt.ylabel('Time(ns)')
plt.title('The values are random from 0 to 5. Size 50-300')
plt.legend()
plt.show()</pre>
```

The values are random from 0 to 5. Size 50-300

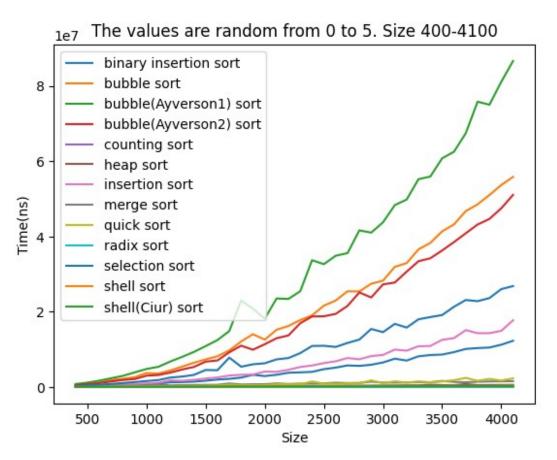

График, показывающий производительность разных сортировок по времени. График описыват массивы размером от 400 до 4100 с случайными элементами [0;5]

```
import matplotlib.pyplot as plt
import pandas as pd

df = pd.read_csv("../csvTables/table.csv", sep=';')
filtered_df = df[(df['Type'] == 'basic mass') & (df['Size'] >= 400)]
grouped_df = filtered_df.groupby('Sort')
for name, group in grouped_df:
    plt.plot(group['Size'], group['Time(ns)'], label=str(name))

plt.xlabel('Size')
plt.ylabel('Time(ns)')
plt.title('The values are random from 0 to 5. Size 400-4100')
plt.legend()
plt.show()
```

Н данном графике мы можем заметить выбросы у всех сортировок, так как происходят и параллельные процессы в копмьютере, и и убавляет производительность для подсчёта сортировок.

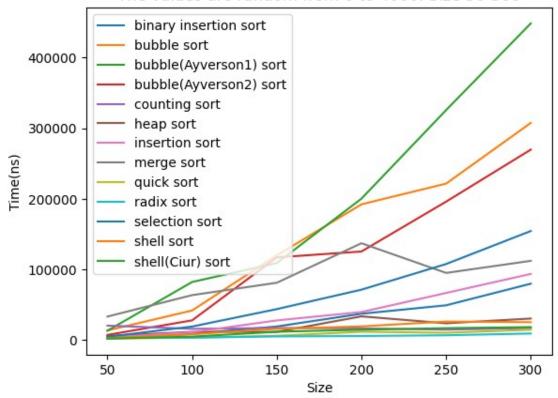

График, показывающий производительность разных сортировок по времени. График описыват массивы размером от 50 до 300 с случайными элементами [0;4000]

```
import matplotlib.pyplot as plt
import pandas as pd
```

```
df = pd.read_csv("../csvTables/table.csv", sep=';')
filtered_df = df[(df['Type'] == 'large mass') & (df['Size'] <= 300)]
grouped_df = filtered_df.groupby('Sort')
for name, group in grouped_df:
    plt.plot(group['Size'], group['Time(ns)'], label=str(name))

plt.xlabel('Size')
plt.ylabel('Time(ns)')
plt.title('The values are random from 0 to 4000. Size 50-300')
plt.legend()
plt.show()</pre>
```

The values are random from 0 to 4000. Size 50-300

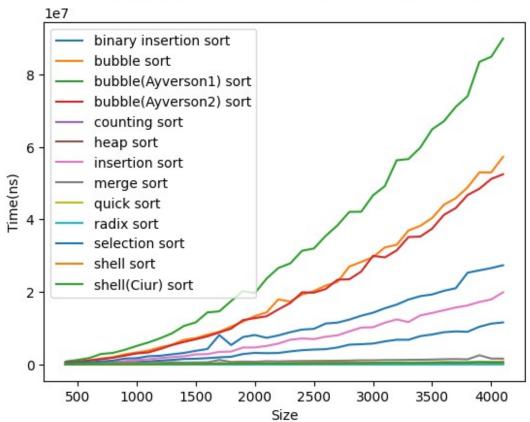

График, показывающий производительность разных сортировок по времени. График описыват массивы размером от 400 до 4100 с случайными элементами [0;4000]

```
import matplotlib.pyplot as plt
import pandas as pd
df = pd.read_csv("../csvTables/table.csv", sep=';')
filtered_df = df[(df['Type'] == 'large mass') & (df['Size'] >= 400)]
grouped_df = filtered_df.groupby('Sort')
for name, group in grouped_df:
    plt.plot(group['Size'], group['Time(ns)'], label=str(name))
```

```
plt.xlabel('Size')
plt.ylabel('Time(ns)')
plt.title('The values are random from 0 to 4000. Size 400-4100')
plt.legend()
plt.show()
```

The values are random from 0 to 4000. Size 400-4100

При больших размерах опять можно заметить выбросы.

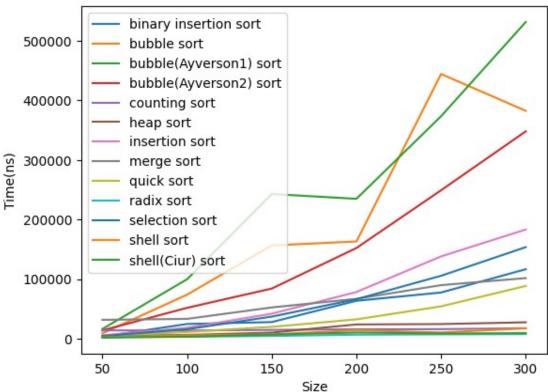

График, показывающий производительность разных сортировок по времени. График описыват массивы(ревёрснутые) размером от 50 до 300 с случайными элементами [0;4000]

```
import matplotlib.pyplot as plt
import pandas as pd
df = pd.read_csv("../csvTables/table.csv", sep=';')
filtered_df = df[(df['Type'] == 'reverse mass') & (df['Size'] <= 300)]
grouped_df = filtered_df.groupby('Sort')
for name, group in grouped_df:
    plt.plot(group['Size'], group['Time(ns)'], label=str(name))

plt.xlabel('Size')
plt.ylabel('Time(ns)')
plt.title('The values are random from 0 to 4000. Size 50-300')</pre>
```

plt.legend() plt.show()

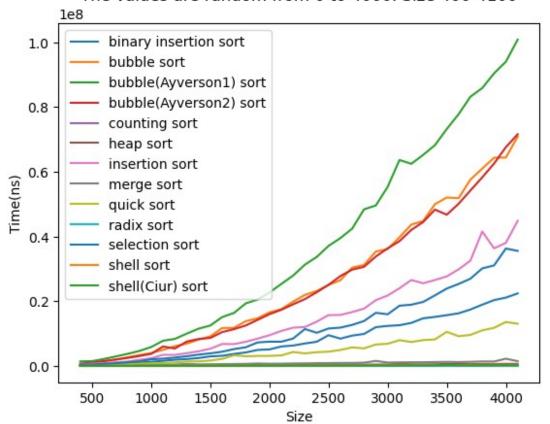

График, показывающий производительность разных сортировок по времени. График описыват массивы(ревёрснутые) размером от 400 до 4100 с случайными элементами [0;4000]

```
import matplotlib.pyplot as plt
import pandas as pd

df = pd.read_csv("../csvTables/table.csv", sep=';')
filtered_df = df[(df['Type'] == 'reverse mass') & (df['Size'] >= 400)]
grouped_df = filtered_df.groupby('Sort')
for name, group in grouped_df:
    plt.plot(group['Size'], group['Time(ns)'], label=str(name))

plt.xlabel('Size')
plt.ylabel('Time(ns)')
plt.title('The values are random from 0 to 4000. Size 400-4100')
plt.legend()
plt.show()
```

The values are random from 0 to 4000. Size 400-4100

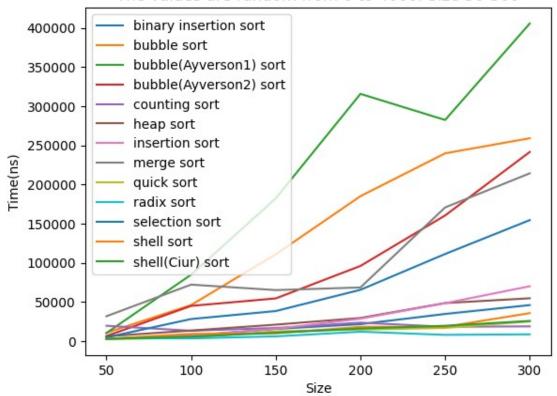

График, показывающий производительность разных сортировок по времени. График описыват массивы(частично отсортированные) размером от 50 до 300 с случайными элементами [0;4000]

```
import matplotlib.pyplot as plt
import pandas as pd

df = pd.read_csv("../csvTables/table.csv", sep=';')
filtered_df = df[(df['Type'] == 'half sort mass') & (df['Size'] <= 300)]
grouped_df = filtered_df.groupby('Sort')
for name, group in grouped_df:
    plt.plot(group['Size'], group['Time(ns)'], label=str(name))

plt.xlabel('Size')
plt.ylabel('Time(ns)')
plt.title('The values are random from 0 to 4000. Size 50-300')
plt.legend()
plt.show()</pre>
```

The values are random from 0 to 4000. Size 50-300

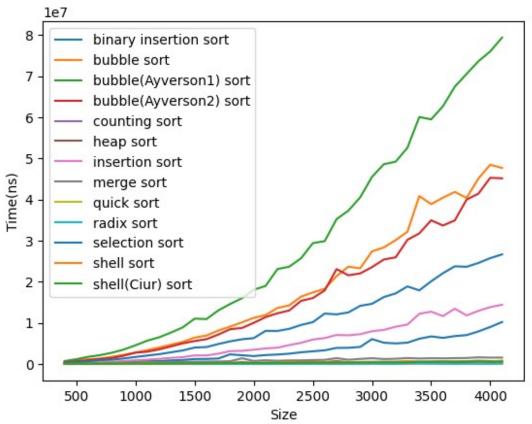

График, показывающий производительность разных сортировок по времени. График описыват массивы(частично отсортированные) размером от 400 до 4100 с случайными элементами [0;4000]

```
import matplotlib.pyplot as plt
import pandas as pd

df = pd.read_csv("../csvTables/table.csv", sep=';')
filtered_df = df[(df['Type'] == 'half sort mass') & (df['Size'] >= 400)]
grouped_df = filtered_df.groupby('Sort')
for name, group in grouped_df:
    plt.plot(group['Size'], group['Time(ns)'], label=str(name))

plt.xlabel('Size')
plt.ylabel('Time(ns)')
plt.title('The values are random from 0 to 4000. Size 400-4100')
plt.legend()
plt.show()
```

The values are random from 0 to 4000. Size 400-4100

В следующем блоке будут идти графики сортировок (отдельно) и их усовершенствования (если они есть)

ПУЗЫРЬКОВАЯ СОРТИРОВКА (РАЗМЕР МАЛЕНЬКИЙ)
